Assessing the Understanding of Mission among Faculty, Staff and Administrators in Jesuit Catholic Institutions

Introduction and Background

Faculty, staff and administrators embody the mission of Jesuit Catholic universities through their everyday interactions with students, or with their indirect activities and decisions. It is easy to suggest that the understanding and practice of the mission by every individual in an institution is one of the key objectives at Jesuit Catholic Colleges and Universities. However, assessing mission from the employee perspective has not always been a priority of Jesuit Catholic institutions.

In 2013, the Association of Catholic Colleges and Universities (ACCU) sponsored a project proposed by Xavier University to assess the experience of mission by faculty, staff, and administrators at Jesuit Catholic institutions. The study consisted of a survey designed to measure the extent to which the experience at their institution has contributed to faculty, staff, and administrators' understanding and development of Jesuit Catholic mission-related values (See Appendix I). The study focused on Jesuit Catholic institutions, as roughly a decade prior, this group of universities had agreed upon a set of questions that suitably captured the intention of their mission statements. These questions have been used often to assess students' and alumni's understanding of mission. In September 2013, a total of 10 institutions administered the survey to their employees independently and sent their data to Xavier University for aggregate and benchmark reporting.

In 2017, the ACCU sponsored a second administration of the Survey on Jesuit Catholic Identity. A total of 12 institutions elected to participate in the September administration, including 5 institutions involved in the 2013 survey administration. In 2013, each institution independently administered the survey to their employees and sent their data to Xavier University. However, with the use of Qualtrics survey software, Xavier University was able to administer the survey to all participating universities' employees in the most recent survey administration.

Full results from the 2017 have been summarized in an aggregate report. Results from the University of Scranton's survey administration can be found in this report. These results include comparisons to the aggregate data for benchmarking purposes. These results also serve as a baseline for an eventual re-administration for institutions like the University of Scranton who first participated in the 2017 survey administration.

Methodology

Xavier University invited all 28 Jesuit Catholic institutions to join in the second administration of the Survey on Jesuit Catholic Identity. Out of these, 12 universities chose to participate (list of institutions is in the report cover). The survey instrument consisted of a set of 20 items with a corresponding Likert scale, and two open-ended questions (Appendix I). The participant institutions were invited to add up to 10 custom questions to the survey to be included in their own administration. The University of Scranton elected to add an additional Likert scale question to the survey instrument. These results are not included in

this benchmarking report.

Xavier University's Office of Institutional Research administered the survey in September 2017 via Qualtrics survey software. The University of Scranton elected to launch the survey on September 11, 2017, with a reminder sent on September 18, 2017. The survey closed to participants from the University of Scranton on September 25, 2017. When all surveys were closed, Xavier University performed the quantitative and qualitative analysis on the aggregated data. Data from all 12 institutions were included in the analysis as the aggregate figure for benchmarking purposes. This report contains a comparative analysis of the University of Scranton survey data as compared to the aggregate. This includes descriptive statistics for all the demographic questions and the Likert question items. Lastly, a qualitative analysis of the two open-ended questions was conducted using standard qualitative survey methodology.

Key Findings

The following are the findings of the analysis:

- The response rate for the University of Scranton was 27%. This was 6% higher than the aggregate response rate of 21%.
- Of all 20 questions in the survey instrument and consistent with the aggregate survey results, the
 Jesuit value that respondents indicated had the highest contribution to their knowledge at their
 institution was "Understanding the mission of their institution" (85% responding "quite a bit" or
 "very much"), followed by "Understanding the Jesuit principle of being men and women for others"
 (82% responding "quite a bit" or "very much).
- Of all 20 questions in the survey instrument and consistent with the aggregate survey results, the
 Jesuit value that respondents indicated had the lowest contribution to their knowledge at their
 institution was "Actively working to further ecological justice and care for the environment" (46%
 responding "quite a bit" or "very much"). Respondents indicated that the second lowest
 contribution to their knowledge was "Finding the Divine in all things" (54% responding "quite a bit"
 or "very much").
- The University of Scranton had higher mean scores on all questions as compared to the aggregate of all participating Jesuit institutions except the question "Actively working toward a more inclusive community." On this question, the mean score was equal to that of the aggregate.
- The questions in which the University of Scranton had the greatest difference in mean score as compared to the aggregate were "Speaking to others (i.e. students colleagues) about Jesuit Catholic values" (a 0.22 higher mean score than the aggregate), "Devoting effort to help others in need" (a 0.22 higher mean score than the aggregate), and "Understanding the Jesuit principle of being men and women for others" (a 0.20 higher mean score than the aggregate).
- The questions in which the University of Scranton had the smallest difference in mean score as compared to the aggregate were "Actively working toward a more inclusive community" (no difference in mean score compared to the aggregate), "Demonstrating respect for others' differences" (a 0.01 higher mean score than the aggregate), and "Ability to look critically at society and its institutions" (a 0.03 higher mean score than the aggregate).

The results of the qualitative analysis of the open-ended responses provided important insights. The most

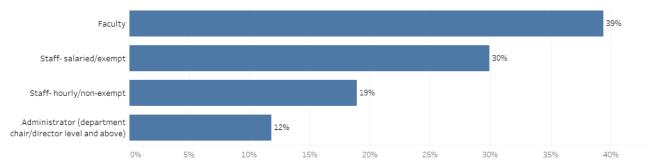

salient findings in those themes are:

- Respondents from the University of Scranton indicated that the theme "Many opportunities to attend conferences, retreats, lectures, and other similar experiences" (cited 118 times, 46% of responses) had the greatest influence on understanding Jesuit Catholic mission, identity/and or values. This was consistent with the aggregate results.
- Respondents from the University of Scranton indicated that second greatest influence on their understanding of Jesuit Catholic mission, identity, and/or values was "Service opportunities provided by the institution, including service learning projects, annual days of service, and mission trips" (cited 60 times, 23% of responses), followed closely by "Everyday life on campus, including conversations with colleagues, interactions with Jesuit clergy, daily mass, and the nature of the work itself" (cited 58 times, 22.5% of responses). In the aggregate results, respondents indicated that the second greatest influence on their understanding of Jesuit Catholic missions, identity, and/or values was "Everyday life on campus, including conversations with colleagues, interactions with colleagues, interactions with colleagues, interactions with colleagues, identity, and/or values was "Everyday life on campus, including conversations with colleagues, interactions with Jesuit clergy, daily mass, and the nature of the work itself."
- Regarding the question on their hope for Jesuit Catholic higher education for the future, most respondents from the University of Scranton cited that, in the future, they wish for Jesuit Catholic institutions to continue their commitment in providing excellent education through Jesuit Catholic values, and would grow its commitment to these values even more (cited 55 times, 24% of responses). These results were consistent with the aggregate.
- The second greatest hope respondents cited was "More focus on social justice on campus (including serving the community, promoting diversity & inclusivity, space for open dialogue, etc.)" (cited 50 times, 22% of the University of Scranton's responses). These results were consistent with the aggregate.
- New response themes were created in the 2017 survey results that were not themes in the 2013 survey results. These themes include: That it would continue to exist, thrive, grow, and be promoted to wide audiences; That Catholic religious identity and Ignatian Spirituality would be maintained and emphasized; Employees would be treated fairly, would have access to programs to learn about the mission, and be trained as competent lay people; and The focus would be on mission rather than finances and the bottom line.
- Respondents also indicated their wish for a continued commitment to developing and caring for the whole person (Cura Personalis), as well as that Jesuit Catholic education becomes more affordable and more available to all people.

Limitations and Future Administrations

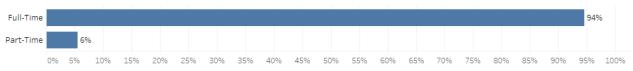

It is important to note that although this survey instrument has been able to provide baseline and benchmarking analysis and results, the survey questions are only measuring how each institution has contributed to "knowledge" of the various questions prompts, not how each institution has promoted living or teaching the various values of the Jesuit Catholic mission. Thus, respondents may have scored each question lower based on understanding the mission and Jesuit values from experiences outside of the institution. In future survey administrations, there is great potential to revise the survey instrument to account for some bias in the results by adding questions that would enhance the understanding of how employees of Jesuit Catholic institutions apply values to their professional and personal lives. Future revisions of the survey instrument can begin with reviewing the additional questions each university was invited to include on the end of their survey, and decide what questions would be generalizable and relevant to the broader employee population of Jesuit Catholic institutions.

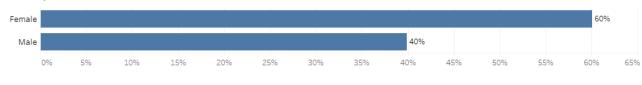

Demographic Results: University of Scranton

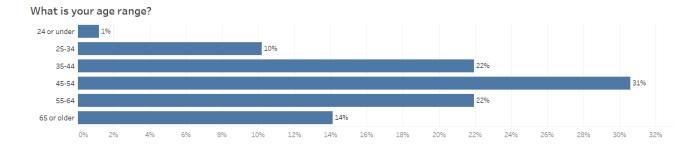

What is your primary function?

What is your employment status?

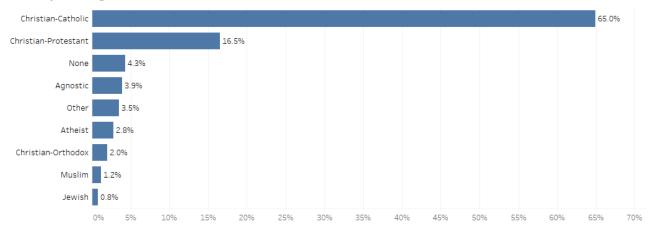

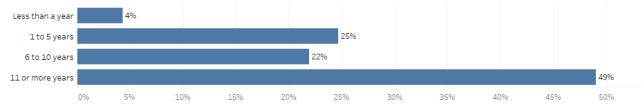

What is your sex?

What is your religious affiliation?

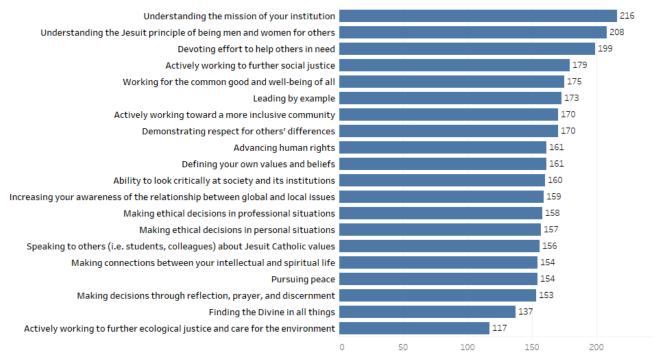

How long have you worked at your institution?

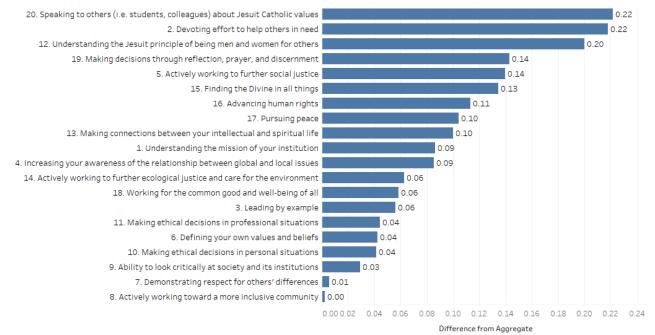

Descriptive Statistic Results: University of Scranton

To what extent has your experience at your institution contributed to your knowledge of the following items: Frequency of respondents answering "Quite a bit" or "Very much"

Mean Score Differences: University of Scranton as compared to the aggregate

Frequency Distribution: University of Scranton vs. Aggregate

Survey of Faculty, Staff and Administrators on Jesuit Catholic Identity, September 2017
